Salem, Tamil Nadu

OBJECTIVE

Passionate AI/ML Engineer and third-year Computer Science student with strong expertise in Machine Learning, Deep Learning, and NLP systems. Experienced in building intelligent applications including medical image classification models, AI-powered APIs, and job-matching systems. Seeking an opportunity to apply AI skills to solve real-world problems and build scalable, intelligent solutions.

EDUCATION

Bachelor of Computer Science and Engineering

Hindustan College of Technology (Formerly known as Dhirajlal Gandhi College of Technology), Salem | 2023 – 2027
CGPA: 7.64

Higher Secondary School (HSC)

Sri Gayathri Higher Secondary School | 2021 – 2023

SSLC

St. Vincent Pallotti Matric Higher Secondary School | 2020 – 2021

SKILLS

Programming: Python

Machine Learning: Regression, Classification, Clustering, Feature Engineering, Model Evaluation

Deep Learning: Artificial Neural Networks (ANN), Convolutional Neural Networks (CNN), Recurrent Neural Networks (RNN), Long Short-Term Memory (LSTM), Autoencoders, Encoder-Decoder Libraries

Libraries & Frameworks: NumPy, Pandas, Scikit-learn, TensorFlow, Keras, Matplotlib, FastAPI, Git, GitHub, Jupyter Notebook

PROJECTS

AI Medical Assistant Bot

Developed an intelligent healthcare assistant using Generative AI and RAG architecture to answer medical queries with context-aware responses. The system processes medical documents, retrieves relevant information through vector search, and generates accurate responses using Large Language Models. Built with FastAPI and LangChain for scalable deployment.

AI DBMS RAG Chatbot

Created an AI-powered DBMS learning assistant that enables users to interact with database concepts through natural language. The chatbot leverages Retrieval-Augmented Generation, semantic search, and vector databases to provide accurate answers from technical documentation and educational resources.

AI Text-to-SQL

Developed a FastAPI-based system that converts natural-language questions into SQL queries.

- Implemented NLP preprocessing to understand user input and database intent.
- Generated SQL queries automatically and executed them against the database.
- Improved accessibility for users to retrieve data without writing SQL manually.

Technologies Used: Python, FastAPI, NLP, SQL, Pandas.

INTERNSHIP

AI/ML Intern

INORA, Salem, Tamil Nadu | Oct 2025 – Apr 2026

- Worked on Machine Learning, Deep Learning, and Data Analysis projects.
- Developed AI models using Python, Scikit-learn, TensorFlow, and Keras.
- Performed data preprocessing, model training, and evaluation.
- Built AI-powered applications and gained hands-on project experience.

AI-Powered Preventive Healthcare Platform

Tech Stack: Next.js, FastAPI, MongoDB, TensorFlow, Scikit-Learn, llms

- Developed a full-stack AI healthcare platform for disease prediction and wellness management.
- Implemented Disease Prediction, AI Doctor, Body Scan Analysis, Diet & Workout Planner, and Food Scanner.
- Integrated Machine Learning, Deep Learning, and LLM technologies for personalized healthcare recommendations.

ACHIEVEMENTS

- Participated in Kalam Awards 2024–2025, presenting innovative technical ideas.
- Built multiple AI and Machine Learning projects independently.

LANGUAGES

- English
- Tamil
